

## **ABSTRACT**

The exam seating arrangement system is a computerized program designed to organize and manage the seating arrangements of students during exams. This system eliminates the need for manual allocation of seats, which can be time-consuming and error-prone. The system is designed to ensure fairness, security, and integrity during the examination process.

The exam seating arrangement system allows for the easy and efficient allocation of seats based on various criteria, such as the number of students, the seating capacity of the examination hall. The system also allows for the random allocation of seats to prevent cheating and collusion among students.

The exam seating arrangement system is user-friendly and can be easily accessed by administrators, teachers, and students. It provides real-time updates and alerts to ensure that any changes to the seating arrangement are communicated effectively.

In summary, the exam seating arrangement system is an essential tool for ensuring fairness, security, and integrity during the examination process. It eliminates the need for manual allocation of seats and ensures that the process is efficient and error-free. The system is easy to use and provides real-time updates, making it an indispensable tool for educational institutions.
